American Plum

This hardy ornamental is excellent for both city dwellings as well as rural areas. During the spring, the white and pink blossoms are long lasting. The tasty fruit is suitable for fresh eating, baking, and preserves. These trees are not widely distributed and pure seed can be hard to come by.

Blue Spruce

People are attracted to the distinctive blue-green color of this hardy evergreen. But Blue Spruce really stands out because it is tough, long lived, and adapted to a wide range of growing conditions. Blue Spruce trees are ideally suited for use in shelterbelts, privacy screens, or as accent trees.

Honey Queen Raspberry

This raspberry is known for its sweet honey flavor and unique yellow color. Its berries are soft and medium-sized, nice for picking and eating in the summer. Honey Queen was developed in Rocky Mountain House by Robert Erskine and is very winter hardy. Canes are yellowish, floricate, arched and moderately spiny. Honey Queen should be trellised upright for best results. While all raspberries prefer the sun, Honey Queen is the best option for planting in shady areas. The Honey Queen Raspberry is a fast-growing floricate. This means that raspberries will not grow on canes the year they first grow. The mature canes they do grow on, however, produce more berries than primocane varieties. Likeness stock photo shown. Info from TreeTime.ca

Northwest Poplar

Northwest Poplar is a large and fast-growing tree. Due to its wide spread, this tree makes a great shade or shelterbelt tree. Northwest Poplar tolerates partial shade, drought, and most types of soil. This poplar produces no fuzz. Northwest Poplar continues to be popular as a shelterbelt species due to the great cost savings that come from the wide spread of the branches. Note: do not plant near buildings or buried services.

Somerset Grape

The Somerset Grape is a cold-hardy variety that is sweet, with a hint of a strawberry taste and tender skin, making them excellent for fresh eating. The grapes grow throughout the summer and go from a light pink and deepen in color as they ripen. The grapes will be at their peak sweetness in mid to late September, making that the best time for harvest. The Somerset Grape is considered a seedless variety. Occasionally the fruit will contain seeds, but they are soft and barely noticeable. The grapes themselves are a bit smaller than the average size you'd find in the grocery store, however the cluster is compact and quite big. This vine is best supported with a trellis.
